

## *Caesalpinia spp*

### **Common name:**

Red Bird of Paradise, Mysore thorn,  
Wait-a-While, Whoa back

### **Palatability to Livestock:**

Eaten under stress conditions.

### **Toxicity to Goats:**

Moderate risk.

### **Toxicity to Other Species**

Toxic to most livestock species.

### **Poisonous Principle:**

Tannins, and unknown toxins.

### **Effects:**

*Signs and Symptoms;*

. Diarrhoea, gastro-enteritis.

*Health and Production Problems;*

. Recovery is usually rapid.

*Treatment;*

. Be aware of potential stock problems.

### **Integrated Control Strategy:**

Spot spray with a herbicide, including a wetting agent. eg, Tordon® or Brushhoff®

### **Comments:**

. A woody scrambling shrub up to 3metres high, some species have long thorny branches and hooked spines.

. Leaflets are long and feathery, and may be deciduous.

. Branches are drooping, slender and thin.

. Usually found in rain forest or open forest, in Queensland and NSW, also found in Western Australia.

. It has spikes of attractive yellow spidery flowers in the leaf axils, with bright red stamens, curving up and out, appearing in spring to autumn.

. Reproducing by seed, seeds and pods are toxic.

. Often planted around watering points; the seed pods often floating away to spread the seed down-stream.

. The green pods of these plants are very irritating to the gastro-intestinal tract.

. *C. gilliesii* is grown as an ornamental, but is now regarded as a garden escapee.

. Native to South America.
