

Gloriosa superba

Common name:

Glory lily, Climbing lily, Flame Lily,

Palatability to Livestock:

Not known to be eaten.

Toxicity to Goats:

High risk.

Toxicity to Other Species:

Toxic to all livestock species.

Poisonous Principle:

Colchicine alkaloids.

Effects:

Signs and symptoms;

- . Violent diarrhoea,
- . Nervous symptoms,
- . Progressive respiratory failure.

Health and Production Problems;

- . Death within hours of eating, or for very small amounts, death within a few days.
- . In humans - Tingling and numbness of tongue and throat, skin irritation, respiratory symptoms, irregular heart beat.

Treatment;

See Vet or Doctor.

Integrated Control Strategy:

- . A garden plant. Do not feed these clippings to any livestock.
- . Use herbicide.
- . Weed out into disposable bags.

Comments:

- . All parts are poisonous especially the tubers.
- . A prostrate perennial, with tuberous roots.
- . Leaves are a bright shiny green attached directly to the stem, tapered to a long tendril-like tip, opposite or whorled around the stem.

- . The flowers appear to be upside down, and single, with stiff stalks, in the forks of leaves, red or orange petals curving upward.
- . Summer to autumn flowering.
- . The fruits are green, 3 lobed and club shaped, drooping and containing red spongy seeds.
- . A native of tropical Asia and Africa, now naturalised in parts of Australia.
- . The root is very toxic, flowers and leaves less so.
